1. The shape-scale parametrization of the pdf of a Gamma random variable is given by

$$
f(x ; k, \theta)=\frac{1}{\Gamma(k) \theta^{k}} x^{k-1} e^{-x / \theta}
$$

where $\Gamma(\cdot)$ denotes the gamma function.
a) For iid Gamma random variables $X_{1}, \ldots, X_{n}$ write down the likelihood and loglikelihood.
b) Write down the estimating equations for $(k, \theta)$ using the loglikelihood, but do not attempt to solve these for the MLEs.
2. Consider a random sample $X_{1}, \ldots, X_{n}$ from a $\operatorname{Unif}(0, \theta)$ distribution for $\theta>0$.
a) Compute the bias of $\hat{\theta}=\max _{i} X_{i}$.
b) Find the MLE of $\theta$. Hint: it may help to write the pdf as

$$
f(x)=\frac{1}{\theta} 1\{0 \leq x \leq \theta\}
$$

where $1\{\cdot\}$ denotes the indicator function.
3. Consider the following grades from a statistics exam in a class that includes both undergraduate and graduate students.

|  | Exam Grades |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Undergrads | 66 | 72 | 74 | 78 | 81 | 82 | 83 | 93 | 93 | 94 |
| Graduates | 71 | 76 | 77 | 84 | 92 | 93 | 96 |  |  |  |

Denote the undergraduates grades by $X_{1}, \ldots, X_{10}$ and assume $X_{i} \stackrel{i i d}{\sim} N\left(\mu_{X}, \sigma_{X}^{2}\right)$.
Similarly, denote the graduates grades by $Y_{1}, \ldots, Y_{7}$ and assume $Y_{i} \stackrel{i i d}{\sim}$ $N\left(\mu_{Y}, \sigma_{Y}^{2}\right)$.
a) Find a $95 \%$ confidence interval for the difference in mean grades $\mu_{Y}-\mu_{X}$.
b) Test the hypothesis of equal population variances (versus unequal) at $\alpha=0.10$.
4. Consider the following histogram of 100 lifetimes (in days) of worker bees during peak summer season.

a) Given $\sum_{i=1}^{100} x_{i}=1376.027$ and $\sum_{i=1}^{100} x_{i}^{2}=22324.95$ find the Normal distribution best fitting this data based on the MLEs of $\mu$ and $\sigma^{2}$.
b) Find a $90 \%$ CI for the median $\tilde{X}$ of the distribution based on the Normal distribution in a). Hint: the mean and median are the same for a normal distribution.
c) Let $F(j, k ; p):=\sum_{\ell=j}^{k-1}\binom{n}{\ell} p^{\ell}(1-p)^{n-\ell}$, where $n=100$. Find a nonparametric CI for $\tilde{X}$ using the following information:

| j | k | p | $\mathrm{F}(\mathrm{j}, \mathrm{k} ; \mathrm{p})$ |
| :---: | :---: | :---: | :---: |
| 40 | 60 | 0.5 | 0.954 |
| 41 | 59 | 0.5 | 0.927 |
| 42 | 58 | 0.5 | 0.889 |
| 43 | 57 | 0.5 | 0.837 |

And, $X_{(40)}=11.680, X_{(41)}=11.681, X_{(42)}=11.769, X_{(43)}=$ $11.844, X_{(57)}=13.403, X_{(58)}=13.528, X_{(59)}=13.864, X_{(60)}=$ 14.239

Comment on which CI, from b) or c), you feel to be more appropriate. Why?
5. Let $X_{1}, X_{2}$ be independent r.v.'s both having density $f(x ; \theta)=\frac{1}{\theta} e^{-x / \theta}$ for $x>0$. Suppose we reject $H_{0}: \theta=2$ versus $H_{1}: \theta=1$ if

$$
\frac{f\left(x_{1} ; 2\right) f\left(x_{2} ; 2\right)}{f\left(x_{1} ; 1\right) f\left(x_{2} ; 1\right)} \leq 1 / 2
$$

Find the probability of type 1 error and the power if we consider the parameter space to be $\theta \in\{1,2\}$.

MATH $494 \quad$ Practice Exam 1 - Friday February $14 \quad$ Dr. Syring
6. The following data are reproduced from the 1996 General Social Survey from the National Opinion Research Center:

|  | Religious Beliefs |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Highest Degree | Fundamentalist | Moderate | Liberal | Total |
| Less than High School | 178 | 138 | 108 | 424 |
| High School or Junior College | 570 | 648 | 442 | 1660 |
| Bachelor or Graduate | 138 | 252 | 252 | 642 |
| Total | 886 | 1038 | 802 | 2726 |

Test the null hypothesis of independence of religious beliefs and education level using the appropriate Chi Squared test and $\alpha=0.01$.

## Formulas

Two-sample t-test and confidence intervals degrees of freedom:
$X_{1}, \ldots, X_{n} \stackrel{i i d}{\sim} N\left(\mu_{X}, \sigma_{X}^{2}\right), Y_{1}, \ldots, Y_{m} \stackrel{i i d}{\sim} N\left(\mu_{Y}, \sigma_{Y}^{2}\right)$

$$
d f=\frac{\left(\frac{s_{X}^{2}}{n}+\frac{s_{Y}^{2}}{m}\right)^{2}}{\frac{s_{X}^{4}}{n^{2}(n-1)}+\frac{s_{Y}^{4}}{m^{2}(m-1)}}
$$

Chi-squared tests: Let $O_{i}$ and $E_{i}$ denote the observed and expected cell counts in a frequency table. Then, $\sum_{i=1}^{k} \frac{\left(O_{i}-E_{i}\right)^{2}}{E_{i}} \dot{\sim} \chi^{2}(d f)$ where $d f=$ number of free parameters - number of estimated parameters.

Beta distribution: $f(x)=\frac{\Gamma(\alpha+\beta)}{\Gamma(\alpha) \Gamma(\beta)} x^{\alpha-1}(1-x)^{\beta-1} . E(X)=\frac{\alpha}{\alpha+\beta}$.
$\Gamma(n)=(n-1)$ ! when $n$ is a positive integer.

## Table II

## Normal Distribution

The following table presents the standard normal distribution. The probabilities tabled are

$$
P(Z \leq z)=\Phi(z)=\int_{-\infty}^{z} \frac{1}{\sqrt{2 \pi}} e^{-w^{2} / 2} d w
$$

Note that only the probabilities for $z \geq 0$ are tabled. To obtain the probabilities for $z<0$, use the identity $\Phi(-z)=1-\Phi(z)$. At the bottom of the table, some useful quantiles of the standard normal distribution are displayed. The R function normaltable.s generates this table.

| $z$ | 0.00 | 0.01 | 0.02 | 0.03 | 0.04 | 0.05 | 0.06 | 0.07 | 0.08 | 0.09 |

Table I

## Chi-Square Distribution

The following table presents selected quantiles of chi-square distribution, i.e., the values $x$ such that

$$
P(X \leq x)=\int_{0}^{x} \frac{1}{\Gamma(r / 2) 2^{r / 2}} w^{r / 2-1} e^{-w / 2} d w
$$

for selected degrees of freedom $r$. The R function chistable .s generates this table.

|  | $P(X \leq x)$ |  |  |  |  |  |  |  |

## Tables of Distributions

711

## Table IV <br> $F$-Distribution <br> Upper 0.05 Critical Points

The following table presents selected 0.95 and 0.99 quantiles of the $F$-distribution, i.e., for $\alpha=0.05,0.01$, the values $F_{\alpha}\left(r_{1}, r_{2}\right)$ such that

$$
\alpha=P\left(X \geq F_{\alpha}\left(r_{1}, r_{2}\right)\right)=\int_{F_{0}\left(r_{1}, r_{2}\right)}^{\infty} \frac{\Gamma\left[\left(r_{1}+r_{2}\right) / 2\right)\left(r_{1} / r_{2}\right)^{r_{1} / 2} w^{r_{1} / 2-1}}{\Gamma\left(r_{1} / 2\right) \Gamma\left(r_{2} / 2\right)\left(1+r_{1} w / r_{2}\right)^{\left(r_{1}+r_{2}\right) / 2}} d w,
$$

where $r_{1}$ and $r_{2}$ are the numerator and denominator degrees of freedom, respectively, The R function fpl . r generates this table
