

Math 456: Topics in Financial Mathematics  
Prof. Wickerhauser

#### FINAL PROJECT OUTLINE

Prepare a one-page outline with your choices for the Final Project.  
It should specify:

1. Your choice of publicly traded stock, its symbol, its exchange, and its current nonzero annual dividend.
2. URLs to websites you will use to find spot prices and option chains for your stock choice.
3. URLs to websites you will use to find riskless rates.

Plan to spend some hours while markets are closed, collecting data from your chosen sites. Plan a time to modify and run programs to perform needed calculations. Prepare a rough schedule for yourself to complete these tasks.
